

Request for Council Action

Originator Engineering	Item Pavement Management Program Update
Agenda Section Study Session	Date 6/8/2015

Description

The Pavement Management Program was implemented in 1992 with plan modifications occurring in 1996, 2004, 2007 and 2013.

In 2015 we have again been reviewing the program to adjust Street Overlays, the possible addition of Trails in the Rights of Way, Trails in the Parks and the PMP Maintenance of the whole trails system. During the recession funding for the program stayed flat while construction costs, mostly due to the cost of petroleum products, increased. As a result, the overall condition of city streets has begun to slip.

Staff has considered many different scenarios to find the optimum combination of reconstruct, overlay and sealcoat mileage to meet PMP street condition goals.

Enclosed, please find a memo summarizing PMP history, current program issues and a power point presentation reviewing the issues.

Requested Action

Review current and proposed Pavement Management Program and discuss modifications needed to meet overall street and trail condition goals.
