Item
Alternative Transportation Plan Update

Date
9/9/2015

Description

Staff is in the process of preparing a final draft of the Alternative Transportation Plan (ATP) Update. One of the revisions to the final draft as directed by Council is to incorporate the costs to maintain the existing trails within City street right of way and City parks into the ATP Update. That way the proposed plans for improving alternative transportation in the City can be considered at the same time as plans and cost for maintaining City trails.

At the June 8 Council study meeting, City Engineering staff made a presentation regarding the Pavement Management Program (PMP). The information and cost estimates from this presentation are being incorporated into the ATP Update.

Once revisions to the final draft of the ATP Update are completed, staff will bring a final version of the ATP Update document to the Council for consideration of approval.
